

The following services are included with the TMK Cyber Ctrl Policy at no extra cost:

- A high-level summary of relevant intelligence from XCyber's proprietary Cyber Intelligence Platform, Tsunami Buoy, focused on highlighting existing cyber risks faced by the Insured;
- A breakdown of existing exposed 'credential pairs' available to the hacking community (i.e. login credentials found on the Dark Web);
- Tsunami Buoy critical alert service – a continuous detection mechanism focused on the Insured's primary top-level domains (TLDs) and other applicable unique identifiers (such as IP addresses);
- Written reports summarising detected risks, with suggested remedial actions as may be applicable;
- Monthly summary of Tsunami Buoy detections, including 'nothing to report' confirmations, of all activity that does not require immediate action/awareness;
- Two hours of consultative support per year to ensure that the Insured is able to act on the intelligence presented.
